
IMD0033 - Probabilidade

Aula 15 - Visualização Exploratória de Dados I

Ivanovitch Silva

Outubro, 2018

Agenda

- Interface entre Pandas & Matplotlib
- Motivação
- Estudo de caso: diferença entre gêneros para cursos STEAM

Atualizar o repositório

```
git clone https://github.com/ivanovitchm/imd0033_2018_2.git
```

Ou ....

```
git pull

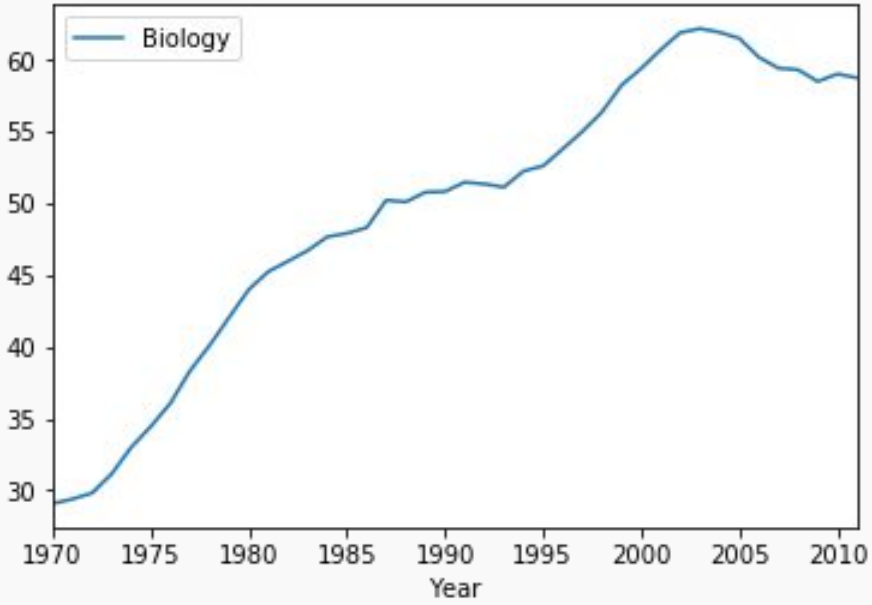
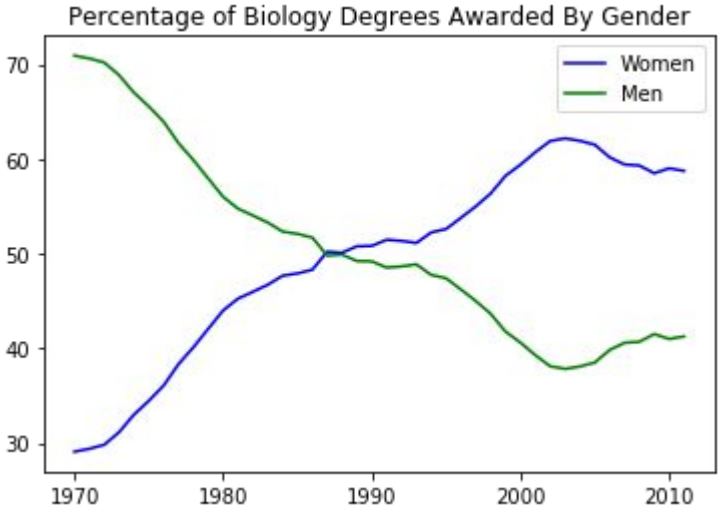
Visualizando a diferença de gênero



Visualizando a diferença de gênero



```
import matplotlib.pyplot as plt

plt.plot(women_degrees['Year'],
         women_degrees['Biology'], c='blue', label='Women')
plt.plot(women_degrees['Year'],
         100-women_degrees['Biology'], c='green', label='Men')
plt.legend(loc='upper right')
plt.title('Percentage of Biology Degrees Awarded By Gender')
plt.show()
```

Visualizando a diferença de gênero

```
%matplotlib inline
women_degrees['men_bio'] = 100-women_degrees['Biology']
women_degrees.plot(kind='line',x='Year',y=['Biology','men_bio'],
                   title='Percentage of Biology Degrees Awarded By Gender',
                   color=['blue','green']).\
                        legend(loc='best',
                               labels=['Women','Men'])
```

```
ax = women_degrees.plot(kind='line',x='Year',y=['Biology','men_bio'],
                   title='Percentage of Biology Degrees Awarded By Gender',
                   color=['blue','green'])
ax.legend(loc='best',labels=['Women','Men'])
```

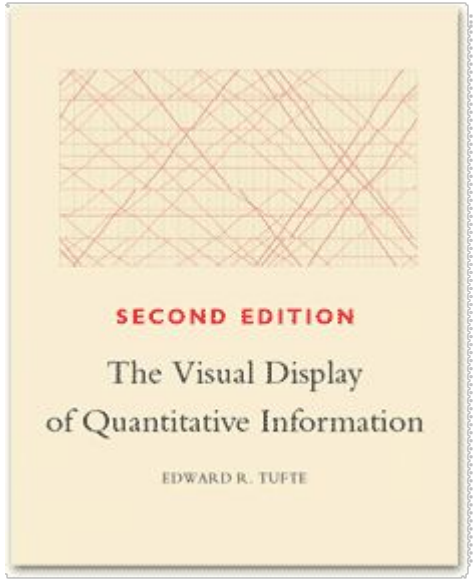
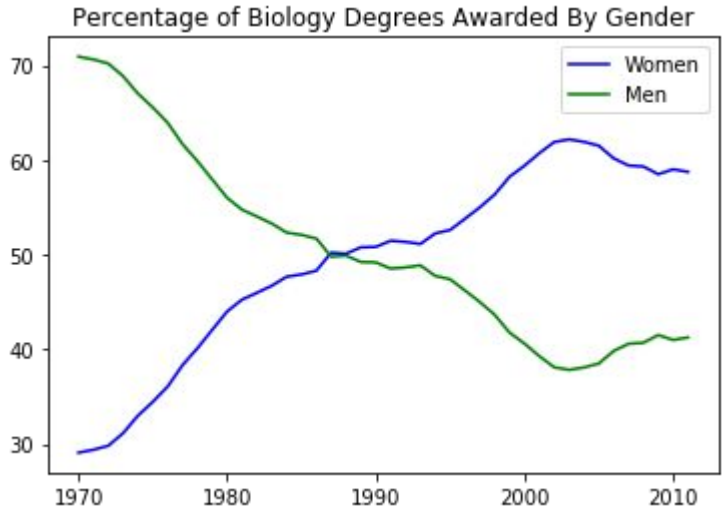
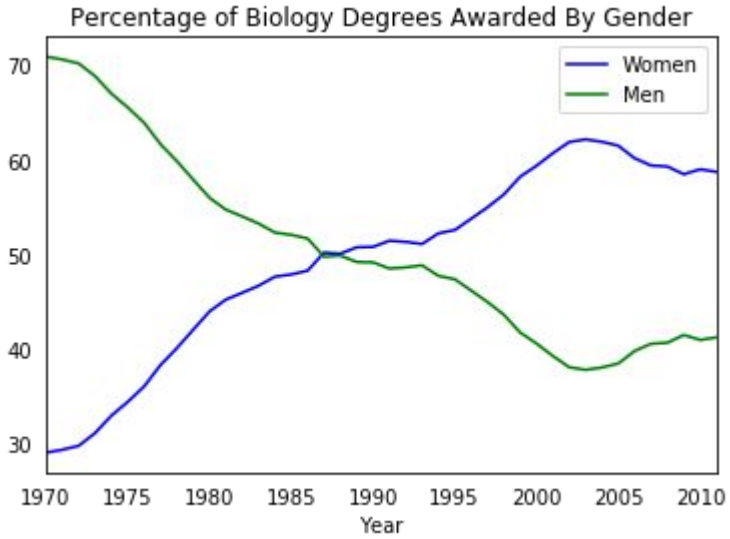
(the **data-ink** ratio)



Ocultar as marcas dos eixos





```
ax.tick_params(bottom="off", top="off", left="off", right="off")
```

Ocultar os contornos

```
ax.spines["right"].set_visible(False)
ax.spines["left"].set_visible(False)
ax.spines["bottom"].set_visible(False)
ax.spines["top"].set_visible(False)
```
